CHM1090Y Biological Chemistry Seminar 2021-2022
Course coordinator: Prof. Andrew Woolley (andrew.woolley@utoronto.ca)

Course Description: The biological chemistry seminar series provides graduate students with the opportunity to learn about a wide range of biological chemistry topics as well as to get practice giving talks to a broad audience of peers. Students in their second year are required to give a seminar on a topic other than their own research, at a level suitable for a grad level course. Students in their 4th year are required to give a talk on their own research. Depending on time-slot availability, the seminar series may also serve as a forum for MSc students to present their exit seminar (typically in year 2 of their program).

Course Evaluation: Students will be evaluated on a pass or fail basis. This evaluation is determined based on student participation in seminars. All graduate students are required to attend seminars regularly and ask questions (this applies to all years). The course coordinator will monitor attendance and participation by graduate students.

This year we will hold grad student seminars on three dates (see schedule below). Talks will be 30 min (25 + 5 for questions), held on Zoom.

(12 max per day)
